

Placing TTurnerB under patient

Lay TTurnerB on bed with label side up

Roll up approximately one quarter of the way.

Roll patient to one side and place TTurnerB under patient's back with the roll (and label) facing down.

Roll patient to the other side.

Unroll TTurnerB. Attach strap securely to bed frame on the side you will be turning patient towards.

Attaching TTurnerB strap to patient's bed

- A - Choose an opening at the base of the bed frame.
- B - Push strap through the opening
- C - Pull strap up around frame and connect the velcro pieces, making sure they are firmly attached.

Using TTurnerB to turn patient

Lower hanger bar. Attach sling loops to hanger bar parallel to the body, opposite the side that is attached to bed frame.

Note: On low ceilings, you may need to lower the bed.

Raise ceiling lift hanger bar. Patient will begin to rise with the sling and turn on their side.

Stop when patient has reached desired position.

Disclaimer: When using TTurnerB to turn a patient, the railing should be up on the side patient is turning towards.
