

Your Sling Source for Safe Patient Mobilization

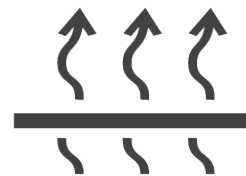

SPU Sling Series

Our SPU Sling Series are a great option for facilities who have challenges with a reusable sling management process. Our SPUs come in a variety of sling styles, allowing you to be able to perform many of your daily standard lifting procedures. To help ensure that the slings are used on the correct patient, we provide a label that includes a clearly visible area for the staff to write the specific patient ID. All of our SPUs can be reprocessed and come with a 90-day limited warranty.

Fabrication

Our fabric is designed to provide a safe and comfortable transfer for the patient. It is breathable, soft to the touch and can be left underneath the patient. Our material strength is not affected by liquids and is latex free. All of our SPU Slings are Proposition 65 compliant.

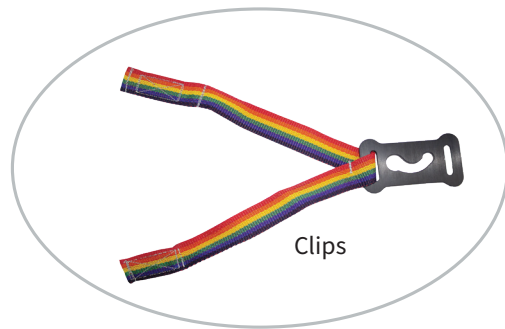

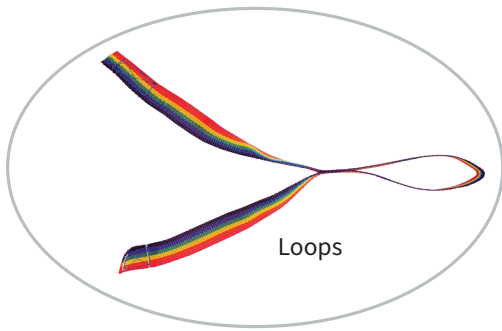

BREATHABLE MATERIAL

Safety Features

We use Box X stitching to attach the straps to the slings. Each Box X is designed to hold up to 960lbs. Our SPU Seated Slings come with a standard bilateral amputee strap to ensure the safety of your amputee patients. The maximum safe working load is indicated on each sling.

Attachment Options

Label

Key information is contained on an easy to read label.
