

*Your Sling Source for Safe Patient Mobilization*

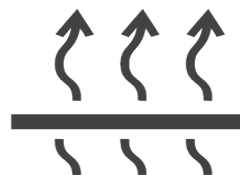

## **ECO Sling Series**

Our ECO Series of slings are more *cost effective* than traditional SPU slings. We use quality fabric that can be rewashed up to 50 times for additional usage without the worry that the material will wear out. To help keep track of how long the sling has been in use, we provide a label that includes a clearly visible area to write the date the sling was first used. All of our ECO slings come with a 90-day limited warranty.

### **Fabrication**

Our fabric is designed to provide a safe and comfortable transfer for the patient. It is breathable, soft to the touch and can be left underneath the patient. Our material strength is not affected by liquids and is latex free. All of our ECO Slings are Proposition 65 compliant.

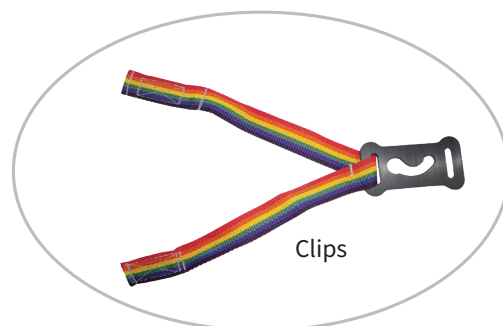

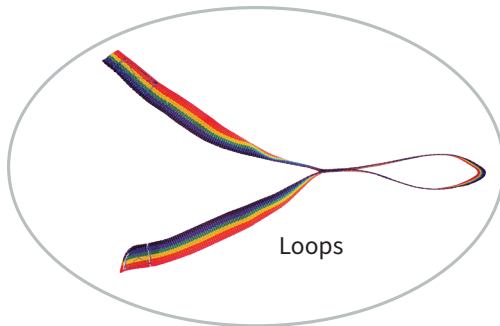

**BREATHABLE MATERIAL**

### **Safety Features**

We use Box X stitching to attach the straps to the slings. Each Box X is designed to hold up to 960lbs. Our Eco Seated Slings come with a standard bilateral amputee strap to ensure the safety of your amputee patients. The maximum safe working load is indicated on each sling.

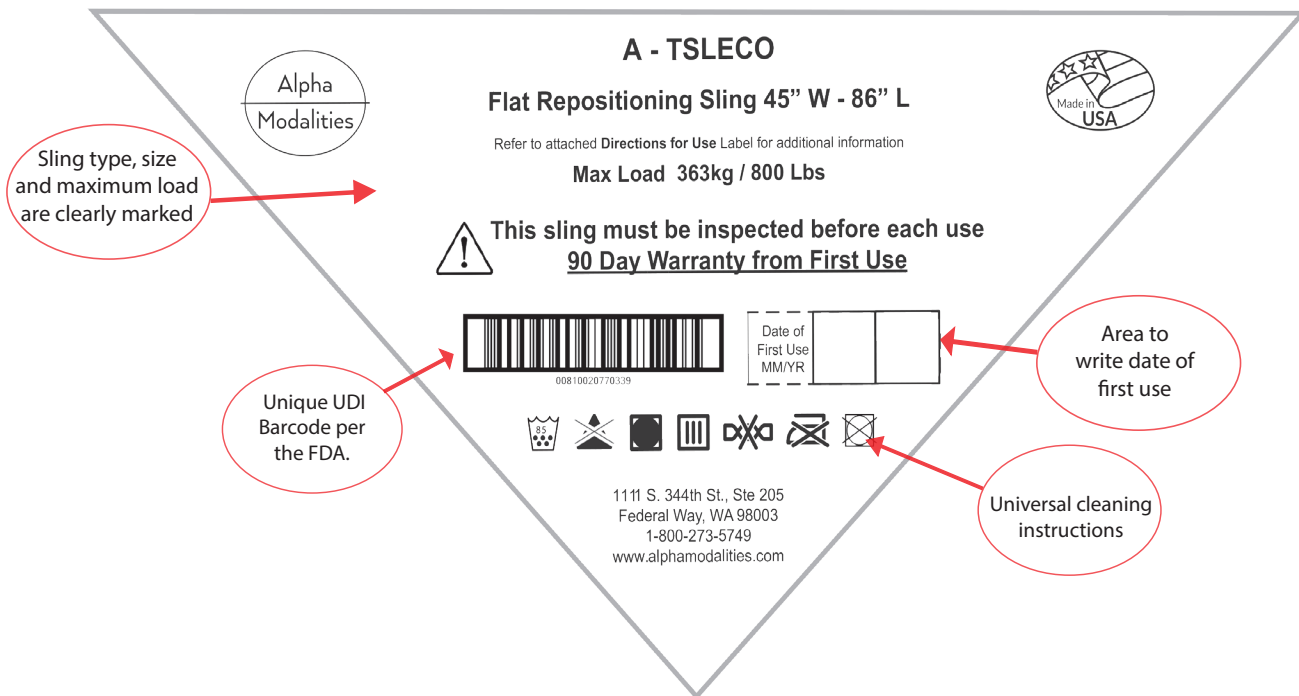

## Attachment Options

## Label

Key information is contained on an easy to read label.

*\* denotes single clip option available*
