

*Your Sling Source for Safe Patient Mobilization*

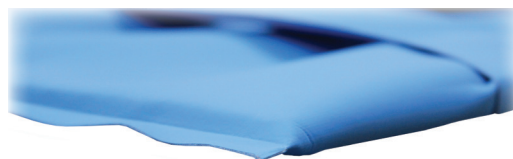

## **NEW Welded SitStand Belt**

Our SitStand Belts are used with powered sit-to-stand devices in order to assist partial weight bearing patients with standing. Our Wipeable SitStand Belts will save your facility approximately 35% over reusable or SPU belts, eliminating the need for multiple units of the same size and are always ready for use.

### **Fabrication**

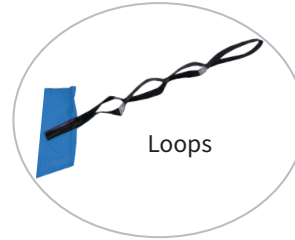

The latest technology in fabrication eliminates the potential for fluid contamination. When stitching is required, we seal with a unique waterproof tape. Herculite Fusion 9 was developed for this advanced type of construction.

### **Safety Features**

Our inner non-skid safety belt with infinite adjustability provides that extra measure of safety should your patient slump while standing.
